DETAILED ACTION

1. Claim 6 has been amended.
2. Claims 7-25 has been cancelled.
3. Claims 1-2, 4-6, and 26 are pending.

Drawings

4. The drawings were received on 29 June 2006. These drawings are acceptable.

Response to Arguments

5. Applicant's arguments filed 28 December 2005 have been fully considered and they are persuasive.

Allowable Subject Matter

6. Claims **1-2,4-6 and 26** are allowed.
7. The following is a statement of reasons for the indication of allowable subject matter: The present invention is directed toward a method and system for securing a personal computer from malicious code contained in a file downloaded onto a personal computer from an external data source. Each independent claim identifies the uniquely distinct features "**providing an isolated secondary operating environment functioning separate from the primary operating system, controlling operations of the personal computer within the isolated secondary operating system, wherein the personal computer is secured from malicious code contained in a file downloaded from the external data source**". The closest prior art, Tremain (Pub No. 2002/0069369) discloses a method and apparatus for providing computer services, across a network by making available what is referred to herein as "virtual servers",

optionally using "virtual networks". However, either singularly or in combination, Tremain fail to anticipate or render the claimed limitations providing an isolated secondary operating environment functioning separate from the primary operating system, controlling operations of the personal computer within the isolated secondary operating system, wherein the personal computer is secured from malicious code contained in a file downloaded from the external data source. The closest prior, White et al. (US Patent No. 6,526,488) discloses a method and apparatus for controlling access to and corruption of information in a computer system by controlling access to the modification of information stored on a storage medium forming part of a computer system comprising: dividing information stored on the storage medium into a plurality of non-overlapping partitions including a boot partition and at least one general partition, characterized by: designating at least one of said partitions a Write Many Recoverable (WMR) partition wherein, in use, if a write command is issued to overwrite any resident information stored in a/the WMR partition by updating information is written on the storage medium in a location other than where the resident information is stored and a (virtual) pointer to the updated information is set up/kept so that the updated information can be accessed, as required during a remainder of a session. However, either singularly or in combination, White et al. fail to anticipate or render the claimed limitations providing an isolated secondary operating environment functioning separate from the primary operating system, controlling operations of the personal computer within the isolated secondary operating system, wherein the personal computer is

secured from malicious code contained in a file downloaded from the external data source.

8. Therefore, **claims 1 and 26** and the respective **dependent claims 2 and 4-6** are in condition for allowance.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
